

What the scat?

Use the chart below to identify who produced the scat.

Look at the scat in the petri dish

Urban wildlife

Many wildlife species live in urban Sydney

You will not see them during the day as they are nocturnal.

To find out which wildlife have been active at night, we can look for their "scat"

Scat is a name scientists use for poop from wildlife

NOTE: for safety, the scat samples on display are not real; we made them with playdough!
